

# Alexa Skill Testing Guide – Project: sairam

## How to Invoke

“Alexa, open sairam” – LaunchRequest response: Hi! You can ask about CPU, memory, storage, uptime, or say laptop status.

## Check CPU

“Alexa, ask sairam what is my CPU usage”  
“Alexa, ask sairam how busy is my processor”  
“Alexa, ask sairam for CPU status”  
“Alexa, tell sairam to check processor usage”

## Check Memory

“Alexa, ask sairam how much memory is used”  
“Alexa, ask sairam what is my memory status”  
“Alexa, ask sairam how much RAM is being used”  
“Alexa, tell sairam to check RAM usage”

## Check Disk

“Alexa, ask sairam how much disk space is left”  
“Alexa, ask sairam what is the disk usage”  
“Alexa, ask sairam about storage left”  
“Alexa, tell sairam to check disk status”

## Full Status Summary

“Alexa, ask sairam how is my laptop”  
“Alexa, ask sairam for full system summary”  
“Alexa, ask sairam for laptop health summary”  
“Alexa, tell sairam to check all system info”

## Uptime

“Alexa, ask sairam how long has my system been running”  
“Alexa, ask sairam what is my uptime”  
“Alexa, ask sairam since when my laptop is on”  
“Alexa, tell sairam system running time”

## Built-in Intents

"Alexa, ask sairam for help" → Help message

"Alexa, stop" / "Alexa, cancel" → Ends session

Unrecognized command → Fallback response: I'm not sure which detail you want. Try CPU usage, memory, storage, uptime, or laptop status.
